Education

New Uzbekistan University

Oct 2021

Bachelor of Software Engineering (GPA: 3.7/4.5)

- Relevant coursework: Data Structures and Algorithms, Artificial Intelligence, Linear Algebra, Probability Models, Operations Research, Theory of Computation.

EPAM Systems: Java Web Development Training Program, epam.com

March 2024 - June 2024

- Participated in a structured training program focusing on Java web development, including key topics like Java fundamentals, SQL, HTML, CSS, Spring, and Spring Boot.
- Designed and implemented a Capstone project, creating a functional web application that demonstrated hands-on proficiency in Java and related technologies.

Experience

New Uzbekistan University: Research Assistant

Sep 2025 – Present

- Conducted reinforcement-learning-based optimization of train speed profiles to reduce energy consumption.
- Built simulation pipelines using real-world rail trajectory, gradient, and curvature data.
- Implemented and evaluated Q-learning variants and deep reinforcement learning models.

Huawei Uzbekistan: Network Engineering Intern

April 2025 – August 2025

- Completed 80+ hours of theoretical training on 2G, 3G, 4G, and 5G technologies, gaining a solid understanding of mobile network architecture.
- Proficient in DWDM fundamentals and advanced optical networking, with practical knowledge in using NetCareCloud for RFC ticket management and network diagnostics.
- Gained hands-on experience with Huawei OSN 9800, including installation, configuration, and commissioning of 100G optical channels in real lab environments.

Projects

Energy-Saving Automation and AI-Based Scheduling for Urban Rail Transit Systems

- Conducted research on AI-based methods for energy-efficient train scheduling.
- Developed graph-based and scalable simulation models for railway systems.
- Validated energy-saving strategies in collaboration with Uzbekistan Railway authorities.

Plant Disease Detection using Deep Learning

- Processed a dataset containing thousands of leaf images, applying image augmentation techniques to enhance generalization.
- Implemented multi-output learning to simultaneously predict disease type (4 categories) and severity level (5 levels).
- Utilized transfer learning with architectures such as VGG16, ResNet50, and EfficientNetB0 for feature extraction.

Publications

Advanced Applications of Machine Learning Techniques in FOITS

- D. Davronbekov, N. Juraeva and A. Boboev, "Advanced Applications of Machine Learning Techniques in FOITS," 2024 4th International Conference on Technological Advancements in Computational Sciences (ICTACS), Tashkent, Uzbekistan, 2024, pp. 773-778, doi: 10.1109/ICTACS62700.2024.10840715.

Courses

Introduction to Software Engineering - IBM Coursera

- Explored software engineering principles, software lifecycle, and modern practices in application development.
- **Certificate:** Software Engineering

Git and GitHub - IBM Coursera

- Comprehensive training on Git version control system and GitHub for collaborative software development.
- **Certificate:** Git and GitHub

Scholarships & Awards

100% Scholarship, New Uzbekistan University <i>Awarded a full scholarship for a 4-year undergraduate program at New Uzbekistan University.</i>	Oct 2021
Physics Olympiad - Regional Stage <i>Secured 1st place in the regional stage of the Physics Olympiad, showcasing strong problem-solving and analytical skills.</i>	March - 2021

Activities

Core team, Google Developer Students Club at New Uzbekistan University – Hosted tech events and workshops, 300+ students engaged; facilitated student networking with techprofessionals; demonstrated public speaking and organizational skills.	Aug 2024 – Present
Co-Founder, Table Tennis Club at New Uzbekistan University – Managed university and international tournaments with 150+ participants, showcasing leadership, organizational, and multitasking abilities. – Represented New Uzbekistan University in 5+ tournaments within and between universities, demonstrating teamwork, responsibility, and athletic skills.	Oct 2023 – Present
Member, Uzbekistan IT Community – Participated in 10+ community discussions and events focused on advancing IT knowledge and collaboration. – Contributed to 5+ workshops and seminars aimed at fostering innovation and skill development in the tech industry. – Networked with 20+ industry professionals to share insights and explore emerging technologies.	Sep 2024 – Present

Summer School & Hackathon

DGIST Summer School on Deep Learning and Computer Vision <i>Daegu Gyeongbuk Institute of Science and Technology (DGIST)</i> github.com/AsilbekGit/Hangul-Recognition-Model – Developed a Hangul character recognition model using deep learning and computer vision techniques.	Jul 2025
Google Solution Challenge 2024: Innovative AI-powered tourism app – Built a tourism app showcasing Uzbekistan’s landmarks with an AI personal assistant.	Feb 2024

Volunteering

4th World Conference on Creative Economy.	Oct 2024
International Summer School in Economics.	Jul 2024
International Conference on Information, System and Convergence Applications.	July 2023
Group Mentor for Freshmen at New Uzbekistan University.	Sep 2023
Google I/O Extended.	May 2023
Google Developer Group, Dev Fest.	Dec 2022
Google Developer Group, Dev Fest.	Nov 2021
World Friends ICT SKKU Volunteers.	Jul 2019
